

VENEZUELAN / BRASILIAN BONDS

Dear Associate,

This is excellent news that I wish to share. If you have a client or clients that have Venezuelan Bonds on Euroclear, we have a trade platform that has finalized a transaction with a previous client. There were 2 bonds that were to go into trade and the Principals were impatient and a one week before closing they changed their mind, This is a terrible embarrassment. I have been asked to help to replace these bonds.

Here is the information that you would want to know.

Monetization is approximately as low as 30% and as high as 50%. I feel more comfortable saying 30%; and if it is more, then terrific. Either way this is a win/win situation. Another great part is there isn't a charge to the client with the bond from the Monetizer which I would not promote.

Then after monetization funds go onto a PPP and the owner of the bond receives 25% weekly which equates to 100% per month after fees etc. There may be some months where it is less and in some cases some where it is more. All numbers are ballpark and the final numbers can be communicated between the Trader and the Owner Of The asset.

How long is the trade?: 80 weeks. It is a two year program. Bear in mind platforms shut down for 4 to 6 weeks prior to christmas and usually come back no later than Jan 20th. Therefore, there will be weeks when no trading is going on. Bottom line we did the math on a \$4.2B Bond backed by cash and here are the approximations

Example Not Guaranteed: \$4.2 B Bond
\$1.26B @30%
\$ 157,500,000 per week 25% per week split 50/50 platform and client x
80 weeks = \$12,600,000,000

Personally, I think this is an amazing return, especially against bonds that no one wanted to touch for many years.

Please note: This is not a solicitation, I am trying to help solid people save face. Thank you for taking the time to read this communication; and it would be great if you can assist.
